1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Page 2

2. Claims 1,2,5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Renfrew et al taken in view of newly relied upon JP 55-93612 Abst., already of record. Applicants have narrowed their claims by limiting the thermosetting resin powder to novolak type phenolic resin powder (which finds support in the specification particularly at page 8, lines 1-4), and have attempted to distinguish their claimed invention from the not now quite as closely related urea formaldehyde impregnated resin articles which further coat a urea formaldehyde powder on the article's outer surface(s) as set forth in Example 4 of Renfrew et al. As regards the Ito Declaration which discloses improved water resistance of the claimed novolak type phenolic resin powders over urea formaldehyde adhesive powders this particular showing is believed inadequate due to the fact that urea formaldehyde powders are no longer relied upon. Note Renfrew et al's teaching at page 2, Col 1, lines 14-21, particularly lines 19-20, that the bonding powders which are taught as being suitable for usage such as the urea formaldehyde condensation products used in Example 4 also cite as suitable powder equivalents "phenol formaldehyde condensation products" such as the novolak type phenolic resins which applicants' now claim. Additionally, the reference only broadly teaches utilizing any suitable natural or synthetic resin as an impregnant for the claimed porous sheet. However, the secondary reference JP '612 teaches a very similar nonwoven fabric which can be impregnated with phenoxy resin, such as applicants' claim. Accordingly, one of ordinary skill would have ample motivation, such as

Art Unit: 1771

improved mechanical strength and improved adhesion to a conductor, to substitute the well known phenoxy resins of the secondary reference JP '612 in place of the broad genus of synthetic resins which are taught as being suitable in Renfrew et al and thereby form, or clearly render obvious, the claimed genus of adhesive articles.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel Zirker whose telephone number is 571-272-1486. The examiner can normally be reached on Monday - Thursday from 8:30 to 6:00. The examiner can also be reached on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris, can be reached on 571-272-1478. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
